

E-Z met™ 2mm HM Coding Keys

ECS offers 10 different colored coding keys, which can be inserted into the multifunction area of the connector to prevent damaging the system due to incorrect insertion of cards with different logic. The coding keys are inserted into the connector after the connector has been installed into the board through the use of a special insertion tool. For 5.0 V logic, CompactPCI® uses brilliant blue, and for 3.3 V logic, cadmium yellow is used.

Male Coding Keys

Coding Key	Code Number	Color	Part Number
	3568	Pastel Orange RAL 2003	73568
	3478	Steel Blue RAL 5011	73487
	3467	Slate Grey RAL 7015	73467
	3456	Cadmium Yellow RAL 1021 3.3v CompactPCI®	73456
